

# Software Requirements Specification (SRS)

---

## Organization Archive & Verification Portal

**This document describes the software requirements, architecture, modules, database structure, workflow, and future scope of the Organization Archive & Verification Portal.**

### 1. Introduction

The Organization Archive & Verification Portal is a centralized web platform developed to digitally manage, store, organize, and publish important organizational records and documents. The portal is designed to reduce manual paperwork and improve the efficiency of maintaining reports, certificates, and other official records.

The platform will act as a digital archive system where administrators can upload and manage internship certificates, annual reports, project reports, financial reports, press releases, and other important documents.

Users can search and verify certificates or view public documents directly through the web interface.

The portal is designed with simplicity and scalability in mind. It does not require user registration or login for public access. Only the admin panel will require authentication to maintain security and administrative control.

Technologies to be used:

- Frontend: HTML, CSS, JavaScript
- Backend: PHP
- Database: MySQL

## 2. System Features

The platform contains several important modules that together create a professional organizational archive system.

Main Features:

- Internship certificate verification using Certificate ID or Roll Number
- Public archive for annual reports and project reports
- Search and filter functionality
- Secure admin dashboard
- File upload and management system
- Feedback and suggestion module
- Responsive user interface for desktop and mobile devices

## 3. System Modules

Major Modules:

1. Admin Authentication Module
2. Archive Upload and Management Module
3. Certificate Verification Module
4. Report Publishing Module
5. Search and Retrieval Module
6. Feedback and Contact Module

The system is designed to maintain clean organization of records while ensuring fast access and simple navigation.

## 4. System Workflow and Architecture

The workflow of the system follows a simple and professional structure.

Workflow:

1. Administrator logs into the admin panel.
2. Administrator uploads reports, certificates, and documents.
3. Files are stored on the server and metadata is stored in the database.
4. Users visit the website and search using certificate IDs or categories.
5. The system retrieves matching records and displays results.
6. Users can submit feedback or contact messages.

Architecture:

The platform follows a simple 3-tier architecture model:

Presentation Layer:

Handles user interface and frontend pages.

Application Layer:

Handles PHP business logic, verification, search, validation, and admin operations.

Data Layer:

Stores all archive records, certificates, and reports in the MySQL database.

Security Features:

- Admin authentication
- Secure file validation
- Input sanitization
- SQL injection prevention
- HTTPS support

## 5. Database Design and GUI Overview

The database is designed using a relational model to maintain consistency and scalability.

Main Database Tables:

- Admin
- Certificates
- Reports
- Documents
- Feedback
- Contact Messages

Relationships:

- One admin can manage multiple documents.
- Multiple certificates can be linked to archive categories.
- Feedback entries are stored independently for analysis.

Suggested User Interface Pages:

- Home Page
- Archive Search Page
- Certificate Verification Page
- Reports Section
- About Organization Page

- Contact and Feedback Page
- Admin Dashboard

The GUI should remain clean, professional, responsive, and easy to use for both administrators and public users.

## **6. Future Scope and Conclusion**

Future Enhancements:

- QR code-based verification
- Advanced analytics dashboard
- Cloud storage integration
- PDF report generation
- AI-powered search suggestions
- Multi-organization archive support
- Mobile application support

### **Conclusion:**

The Organization Archive & Verification Portal provides a scalable and professional solution for maintaining organizational records digitally. The platform simplifies document management, improves accessibility, and enables quick verification of certificates and official reports.

The system is intentionally designed to remain lightweight, user-friendly, and easy to maintain while supporting future expansion according to organizational requirements.
